Preface

An environment is a surrounding of an organism with which that organism interacts. In this changing world humans are making innovations daily to make their life more convenient and luxurious. This human grid for so called development is deteriorating environment badly leading in to the deterioration of environment. Deterioration of environment is causing different environmental issues the most significant environmental issues are greenhouse effect, ozone layer depletion resulting in to the Global warming, climate change, Polar ice melt, rise in sea level etc.

Present book Environmental problems: causes and solutions focuses on environmental problems, it's impact on biodiversity and human life. This book will give scientific ideas to save our environment for next generation in several ways by accepting and adopting a simple life style.

This book includes Research articles on environmental pollutions, impact of environmental degradation on biodiversity, COVID-19 and Environment, Biomedical waste management, Environmental moments, Namami Gange Project, Environmental education etc.

This book will be useful for learners and researchers as it gives an idea about present status of environment and it suggest possible control over environmental degradation.
